## LAB-8

### Lab Exercises

Create a new Eclipse project, and within the project create a package.  
Create a class for a Boa.

```
eclipse-workspace - Lab8/src/boa/Boa.java - Eclipse IDE
File Edit Source Refactor Navigate Search Project Run Window Help

Package Explorer x JUnit
Lab8
  JRE System Library [JavaSE-17]
  src
    boa
      Boa.java
      BoaTest.java
  JUnit 5

Boa.java x *BoaTest.java ArrayList.class
1 package boa;
2 // represents a boa constructor
3 public class Boa {
4     private String name;
5     private int length; // the length of the boa, in feet
6     private String favoriteFood;
7     public Boa (String name, int length, String favoriteFood){
8         this.name = name;
9         this.length = length;
10        this.favoriteFood = favoriteFood;
11    }
12    // returns true if this boa constructor is healthy
13    public boolean isHealthy(){
14        return this.favoriteFood.equals("granola bars");
15    }
16    // returns true if the length of this boa constructor is
17    // less than the given cage length
18    public boolean fitsInCage(int cageLength){
19        return this.length < cageLength;
20    }
21
22
23    public int lengthInInches() {
24        return this.length * 13;
25    }
26
27 }
28 }
```
